

Coding with App Lab and Microbits

This summer, Jr.High school students are invited to attend a fun 2-day workshop learning to code using Code.org's App Lab and BBC's microbit. Students will use App Lab to create apps that can be published and shared to run on any computer, tablet, or smartphone with a modern browser. The BBC's microbit is a small hardware processing device (about 1/2 the size of a credit card). Projects will include: LED message display, thermometer, compass, connection to external LEDs, composing music, etc.

The registration fee for the two ½ days is \$10. Registration is limited to the first 25 students at each site. Enrollment is open to current 6th-8th grade students in Nebo School District.
